CQube

It is with great pride and pleasure that we present CQube – a coffee machine based upon new logic and vanguard technology. CQube lives up to all those criteria that the we ourselves and the world around us demand of us and our machines. It is about perfectly brewed coffee, exclusive design, flexible technology, energy-efficient operation, and minimal environmental impact during the lifetime of the coffee machine. We proudly present to the world – CQube.

What is design?

Design is composed of forms, colors, space, and volume. Straight lines, crooked curves, contrasts and balance, light and dark. It is composition.

Everything made by man is built by design. It may entail solutions to problems or the conveyance of feelings, flowing forth from the desire to change and please.

So what is design? Design is creative strength.

It is our creative strength.

A new design

CQube is designed in a simple, plain, and minimalistic style, conforming to the Scandinavian sense of aesthetics. This enables our coffee machines to blend into all types of environments, from ultramodern design studios to government headquarters.

The dramatic black and the innocent white brushed aluminum front, sophisticated details, and modular design reveal both functional and aesthetic sensibilities. CQube can also be ordered to display your own branding on the front. This is our creative strength.

technology

What is technology?

Technology is making use of tools and knowledge in order to implement change in our daily lives. Focusing the power of nature in the direction we desire.

It may be machines, vehicles, and fabrications, but it may also be knowledge, lessons learned, or theories. It is what can be touched and counted.

So what is technology? Technology is precision.

It is our precision.

A new technology

Open the front of the CQube and you will encounter a whole new world. CQube's modular design is a unique innovation which makes the coffee machine flexible and easily accessible for service. Every detail has been carefully designed and created with the highest precision in mind. The exceptional coffee grinder and the governing of the exact temperature and dosage of the coffee are just some of the examples of this comprehensive concept. All of the components perform in synchronization in order to serve you the best possible coffee experience. This is our precision.

environment

What is the environment?

The environment is all that surrounds us. It is the ground we walk on, the air we breathe, and the water we drink. It is also the interplay between our surroundings and the living things residing in it. It is the art of balance between giving and taking.

It is respect for the past and concern for the future. So what is the environment? The environment is a responsibility. It is our responsibility.

Our environment

Minimal environmental impact during the lifetime of the coffee machine. This was one of our key demands when creating the CQube. Our concern is eco-design, which means environmentally effective production, energy-efficient operation, simple disassembly, and recyclable materials. That is why we are the top company in this business implementing and presenting energy declarations for our coffee machines. This is our responsibility.

service

What is service?

Service is maintenance. To continually monitor and care for your investment. Using small measures you can avoid larger problems.

It is also about being ready for tomorrow, for the unexpected, and putting yourself in the hands of an expert in his area. So what is service? Service is consideration.

It is our consideration.

Easy to handle

Thanks to CQube's new intelligence and modular design, inspection and maintenance is simple to perform. This saves time and increases cost-effectiveness. Easy access is provided to the machine's controls and most things can be performed from the front. For example, on the inside of the door there is a set of controls that govern the cleaning cycles for the machine. The side panels may also be taken off to facilitate service maintenance. Simplicity, high quality and logic. This is our consideration.

taste

What is taste?

Taste is a chemical reaction. Conveyed by one million taste receptors in our mouth and six million sensory cells in our nasal passages.

It's a mix of sweetness, saltiness, sourness and bitterness. It's also savoriness, fattiness, spiciness and other sensations. So basically taste is chemistry.

But it's so much more than that. Taste is a sensation. An experience. A point of view. A feeling and a memory.

So what is taste? Taste is passion. It's our passion.

Perfect taste

Coffee lovers around the world have the same desire – the perfect cup of coffee. CQube fulfills that wish every time. Perfect coffee is a combination of coffee beans, water, temperature, and technology. CQube enables precision. What we provide is precision for the brewing temperature and time, coarseness levels of the grind, and a recipe that conforms to our unique types of coffee. Taste is precision and passion. This is our passion.

solution

What is the best solution? It is a solution that is based upon a stable foundation but prepared for the unpredictable. Solid and adaptable. A solution that combines the strengths of separate parts and thereby creates a stronger whole.

The best solution is one that solves a unique requisite in a unique way. The best solution is a custom-built one. We are now combining our five strengths to create a unique solution just for you. For your needs.

So what is the best solution? CQube is the best solution. CQube is our solution.

CQube provides you with the option of selecting appearance, size, and functionality according to your own specific tastes.

Start with a basic model and upgrade later as it becomes necessary.

CQube is available in Medium and Large. The capacity needed will determine your choice. The Carbon Black coffee machine's brushed aluminum exterior emanates a sober elegance, while the Crem White one demands to be looked at and harmonizes with all interior designs.

CQube can be placed on a counter or ordered with a base cabinet underneath. Would you like your own branding or logo on the front? No problem. You decide which CQube that will suit your needs and we will see that it becomes a reality. CQube is the best solution. CQube is your solution.

What's in it for you?
